SPECIFICHE E
ISTRUZIONI

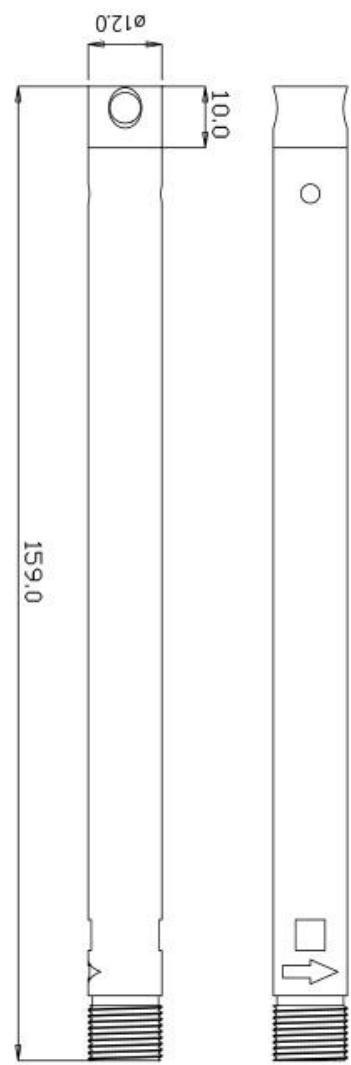

SPECIFICHE TECNICHE

| | |
|-----------------------------|--|
| Fluidi: | aria e gas compatibili, non combustibili |
| Precisione: | $\pm 2.5\%$ f.s. ± 0.1 m/s @ 25°C $\pm 3.5\%$ f.s. ± 0.1 m/s @ 25°C (per campo 0-3m/s) |
| Tempo di risposta: | 1 secondo per il 95% del valor finale |
| Limiti di temperatura: | processo da 5 a 50°C ambiente da 0 a 50°C |
| Limite di pressione: | 0.5 bar |
| Umidità limite: | 5-95% ur non condensante |
| Requisiti di alimentazione: | 18-26 VDC |
| Scale disponibili: | 0-1, 0-3, 0-10, 0-20, 0-30 m/sec |
| Segnale di uscita: | 0-10 V, 0-20 mA 4-20 mA collegamento 3 fili |
| Resistenza loop: | 500 ohm max |
| Consumo corrente: | 100 max |
| Collegamento elettrico: | - Connettore M12 - Cavo 3 mt - Morsettiera |
| Orientamento di montaggio: | la sonda deve essere allineata con il flusso d'aria |
| Certificazioni: | CE |
| Materiali: | - Sonde A,B,P Sensore in vetro/ceramica Testa di misura macromelt®/alluminio - Sonda S Acciaio inox 316, sensore in vetro/ceramica |
| Applicazioni: | condizionamento, misure di flusso, cappe di aspirazione, monitoraggio ventilatori, raffreddamenti ad aria, misure di velocità per intasamento filtri, ced, cc. |

INSTALLAZIONE E UTILIZZO

Montaggio

Per un corretto utilizzo dello strumento, è necessario che il flusso sia parallelo alla freccia di riferimento presente sul fondo dello strumento, in quanto, un angolo di installazione diverso porterebbe a un errore nella lettura della velocità.

Installazione con flangia per condotte quadre

Per una corretta installazione in questo tipo di condotta, si consiglia l'utilizzo dei raccordi FNRC (pag. 8), in modo da poter fissare la flangia e successivamente allineare il sensore tenendolo mediante il raccordo a compressione.

Installazione con raccordo per condotte con manicotto saldato

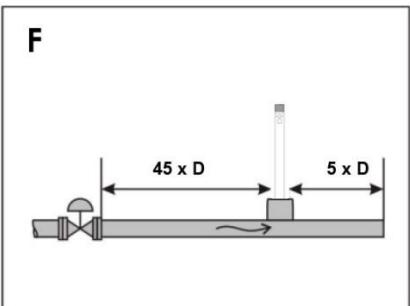

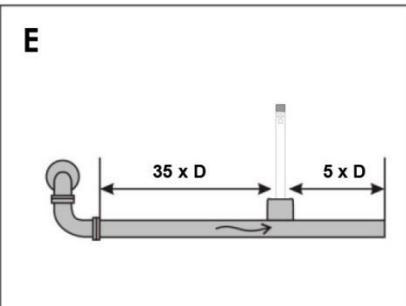

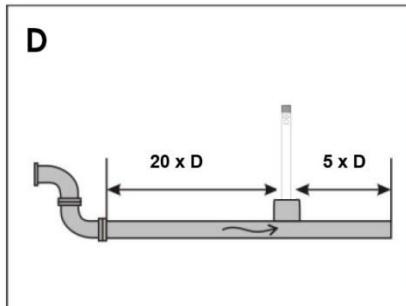

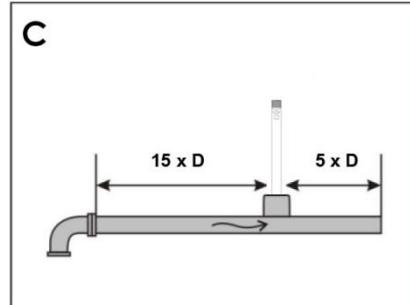

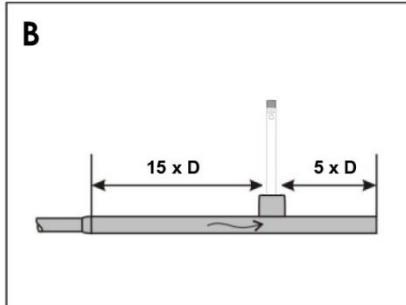

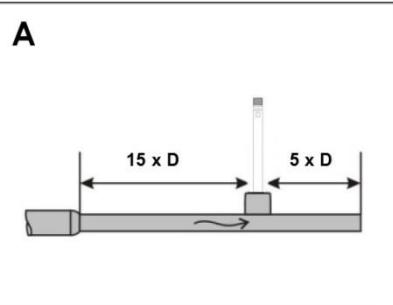

Per questo tipo di condotta, è richiesto l'utilizzo del raccordo RC (pag.8), disponibile con diversi filetti.

La condotta deve essere provvista del corretto manicotto saldato sulla condotta stessa.

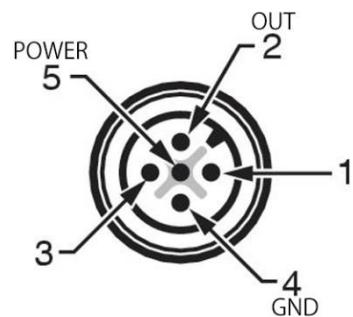

Tabella tratti rettilinei monte/valle

| | Deviazione del flusso prima della misura | Lunghezza minima Diametri a monte (L1) | Lunghezza minima Diametri a valle (L2) |
|----------|---|---|---|
| | Curva < 90° | 12 x D | 5 x D |
| A | Riduzione (Tubo si restringe alla sezione di misura) | 15 x D | 5 x D |
| B | Espansione (Tubo si espande alla sezione di misura) | 15 x D | 5 x D |
| C | Angolo a 90° | 15 x D | 5 x D |
| D | 2X angolo a 90° | 20 x D | 5 x D |
| E | 2X angolo a 90° Su assi differenti | 35 x D | 5 x D |
| F | Valvola di controllo | 45 x D | 5 x D |

SOFTWARE

Insieme allo strumento, è possibile acquistare il software per la configurazione del dispositivo, con cui è possibile personalizzare alcuni parametri.

È possibile scaricare il software dal nostro sito www.comhas.com nella sezione dedicata al prodotto T-FLOW.

Prima di lanciare il software, è necessario collegare il dispositivo tramite il cavo

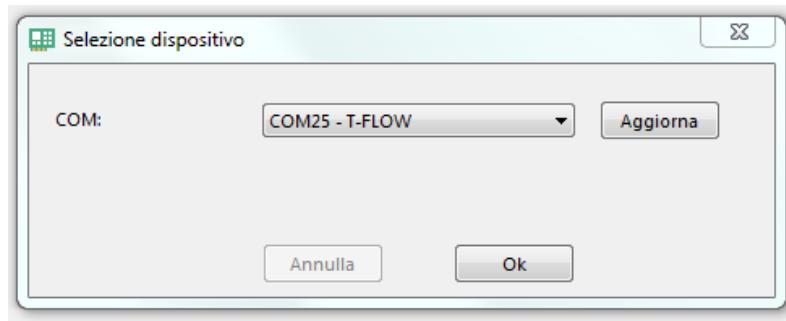

- **CMH-CBL-USB-SP:** in caso di collegamento a morsettiera (MRS)
- **CMH-CBL-USB-M12:** in caso di collegamento M12
- **CMH-CBL-USB-MRS:** in caso di collegamento con cavo (CBL)

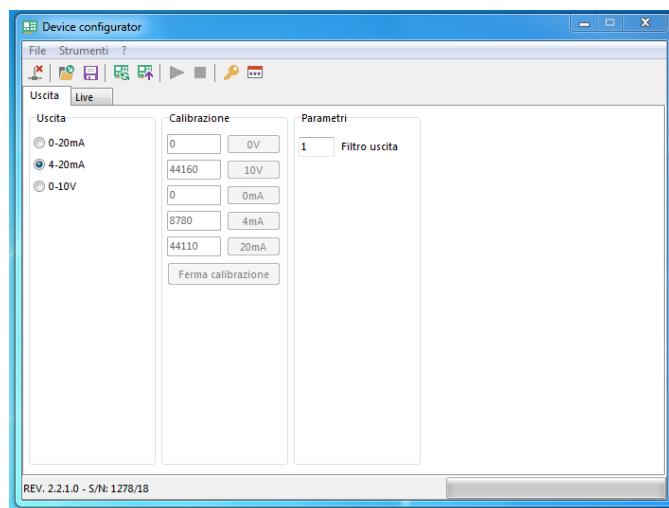

Funzioni principali

Dopo avere collegato il dispositivo tramite il cavo USB, è necessario alimentare lo strumento, seguendo le istruzioni indicate nella sezione “Morsetti e collegamenti”.

Avviando il software, accertarsi che quest’ultimo riconosca il dispositivo, come in figura sottostante.

Il software permette tramite connessione USB la configurazione del T-Flow Comhas, permettendo la selezione del tipo di uscita in corrente (0-20 / 4-20mA) o in tensione (0-10V).

Barra dei pulsanti

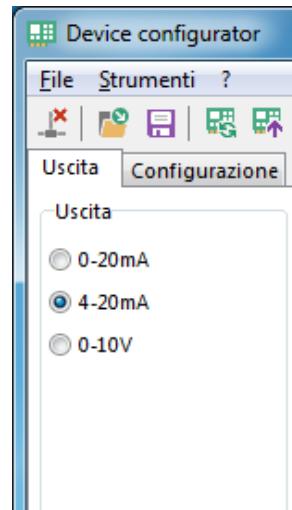

| | |
|---|---|
|  | DISCONNETTE UN DISPOSITIVO |
|  | RICARICA UNA CONFIGURAZIONE DA FILE |
|  | SALVA UNA CONFIGURAZIONE SU FILE |
|  | LEGGE LA CONFIGURAZIONE DEL DISPOSITIVO CONNESSO |
|  | SCRIVE SUL DISPOSITIVO LA NUOVA CONFIGURAZIONE, LE IMPOSTAZIONI SARANNO ATTIVE SOLO DOPO LA SCRITTURA SUL DISPOSITIVO |
|  | PERMETTE L'ACCESSO ALLA CALIBRAZIONE DELL'USCITA TRAMITE PASSWORD "Service" |
|  | PANNELLO DI INSERIMENTO CHIAVI DI ATTIVAZIONI |

Selezione Uscita

E' possibile selezionare l'uscita desiderata in corrente (0-20 / 4-20mA) o in tensione (0-10V), per i collegamento fare riferimento alla sezione "Morsetti e collegamenti" (pag. 13).

N.B. Per salvare le modifiche apportate, è necessario premere il pulsante  per sovrascrivere la nuova configurazione.

INSTALLATION AND USE

Mounting

For a correct use of the instrument, it is necessary that the flow is parallel to the reference arrow on the bottom of the instrument, because a different installation angle would lead to an error in the velocity reading.

Flange installation for square ducts

For a correct installation in this type of conduit, we recommend the use of FNRC fittings (page 8), in order to fix the flange and then align the sensor holding it through of the compression fitting.

Installation with pipe fitting with welded sleeve

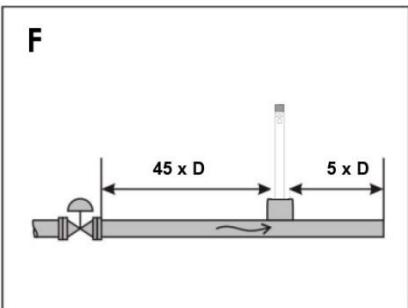

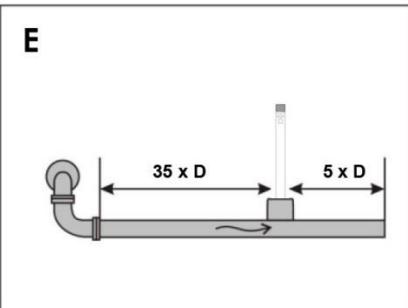

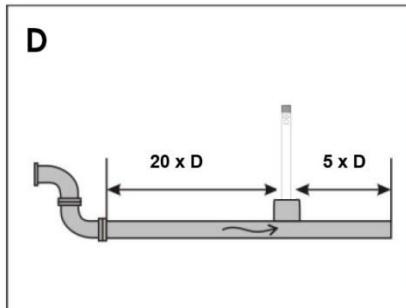

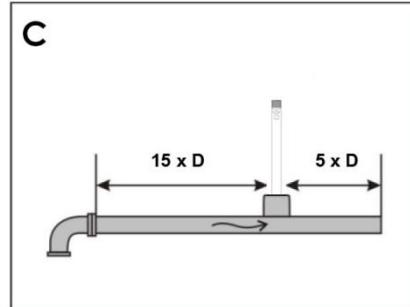

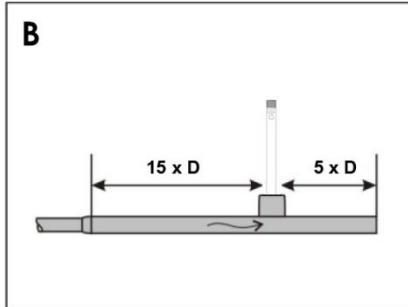

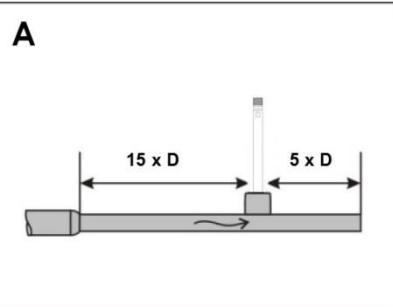

For this type of piping, the use of the RC (page 8) fitting is required, available with different threads.

The pipe must be provided with the correct sleeve welded on the pipe itself.

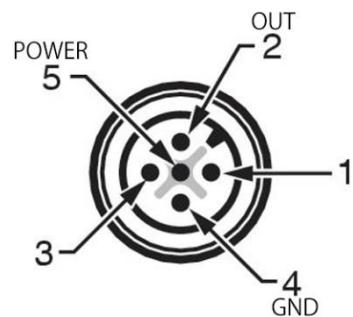

Tablet Inlet / Outlet runs

| | Flow obstruction before the measurement section | Min length Inlet run (L1) | Min length Outlet run (L2) |
|---|---|---------------------------|----------------------------|
| | Slight curve < 90° | 12 x D | 5 x D |
| A | Reduction (Pipe narrows to the measurement section) | 15 x D | 5 x D |
| B | Expansion (Pipe expands to the measurements section) | 15 x D | 5 x D |
| C | 90° elbow or T-piece | 15 x D | 5 x D |
| D | 2X elbow at 90° | 20 x D | 5 x D |
| E | 2X elbow at 90° 3-dimensional | 35 x D | 5 x D |
| F | Control valve | 45 x D | 5 x D |

SOFTWARE

Together with the instrument, it is possible to purchase the software for the configuration of the device, with which it is possible to customize some parameters.

You can download the software from our website www.comhas.com in the T-FLOW product section.

Before launching the software, the device must be connected via cable

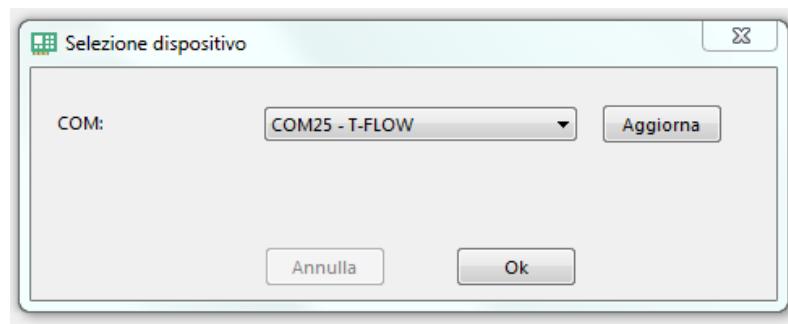

- **CMH-CBL-USB-SP:** in case of connection with terminal block (MRS)
- **CMH-CBL-USB-M12:** in caso of connection with M12
- **CMH-CBL-USB-MRS:** in case of connection with cable(CBL)

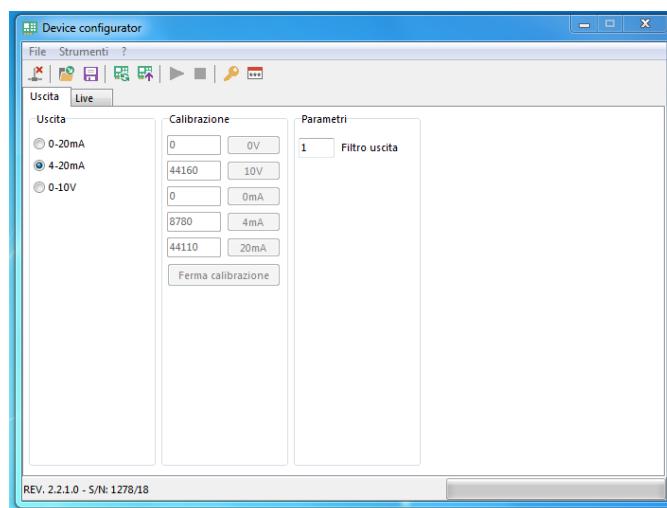

Main functions

After connecting the device via the USB cable, the instrument must be powered, following the instructions in the "Terminals and Connections" section.

When starting the software, make sure that the software recognizes the device, as shown in the figure below.

The software allows via USB connection the configuration of the Comhas T-Flow, allowing the selection of the type of current output (0-20 / 4-20mA) or voltage (0-10V).

Button bar

| | |
|--|--|
| | DISCONNECT A DEVICE |
| | RELOAD A FILE CONFIGURATION |
| | SAVE A CONFIGURATION ON FILE |
| | READ THE CONFIGURATION OF THE CONNECTED DEVICE |
| | WRITE ON THE DEVICE THE NEW CONFIGURATION, THE SETTINGS WILL BE ACTIVATED ONLY AFTER WRITING ON THE DEVICE |
| | ALLOWS ACCESS TO THE OUTPUT CALIBRATION THROUGH PASSWORD "Service" |
| | INSERTING PANEL KEYS OF ACTIVATIONS |

Select output

It is possible to select the desired current output (0-20 / 4-20mA) or voltage (0-10V), for the connections refer to the section "Terminals and connections" (pag.28).

NOTE! To save the changes, you need to press the button  to overwrite the new configuration.
